PacketExpert™ mTOP™ Probe

Front Panel View

Rear Panel View

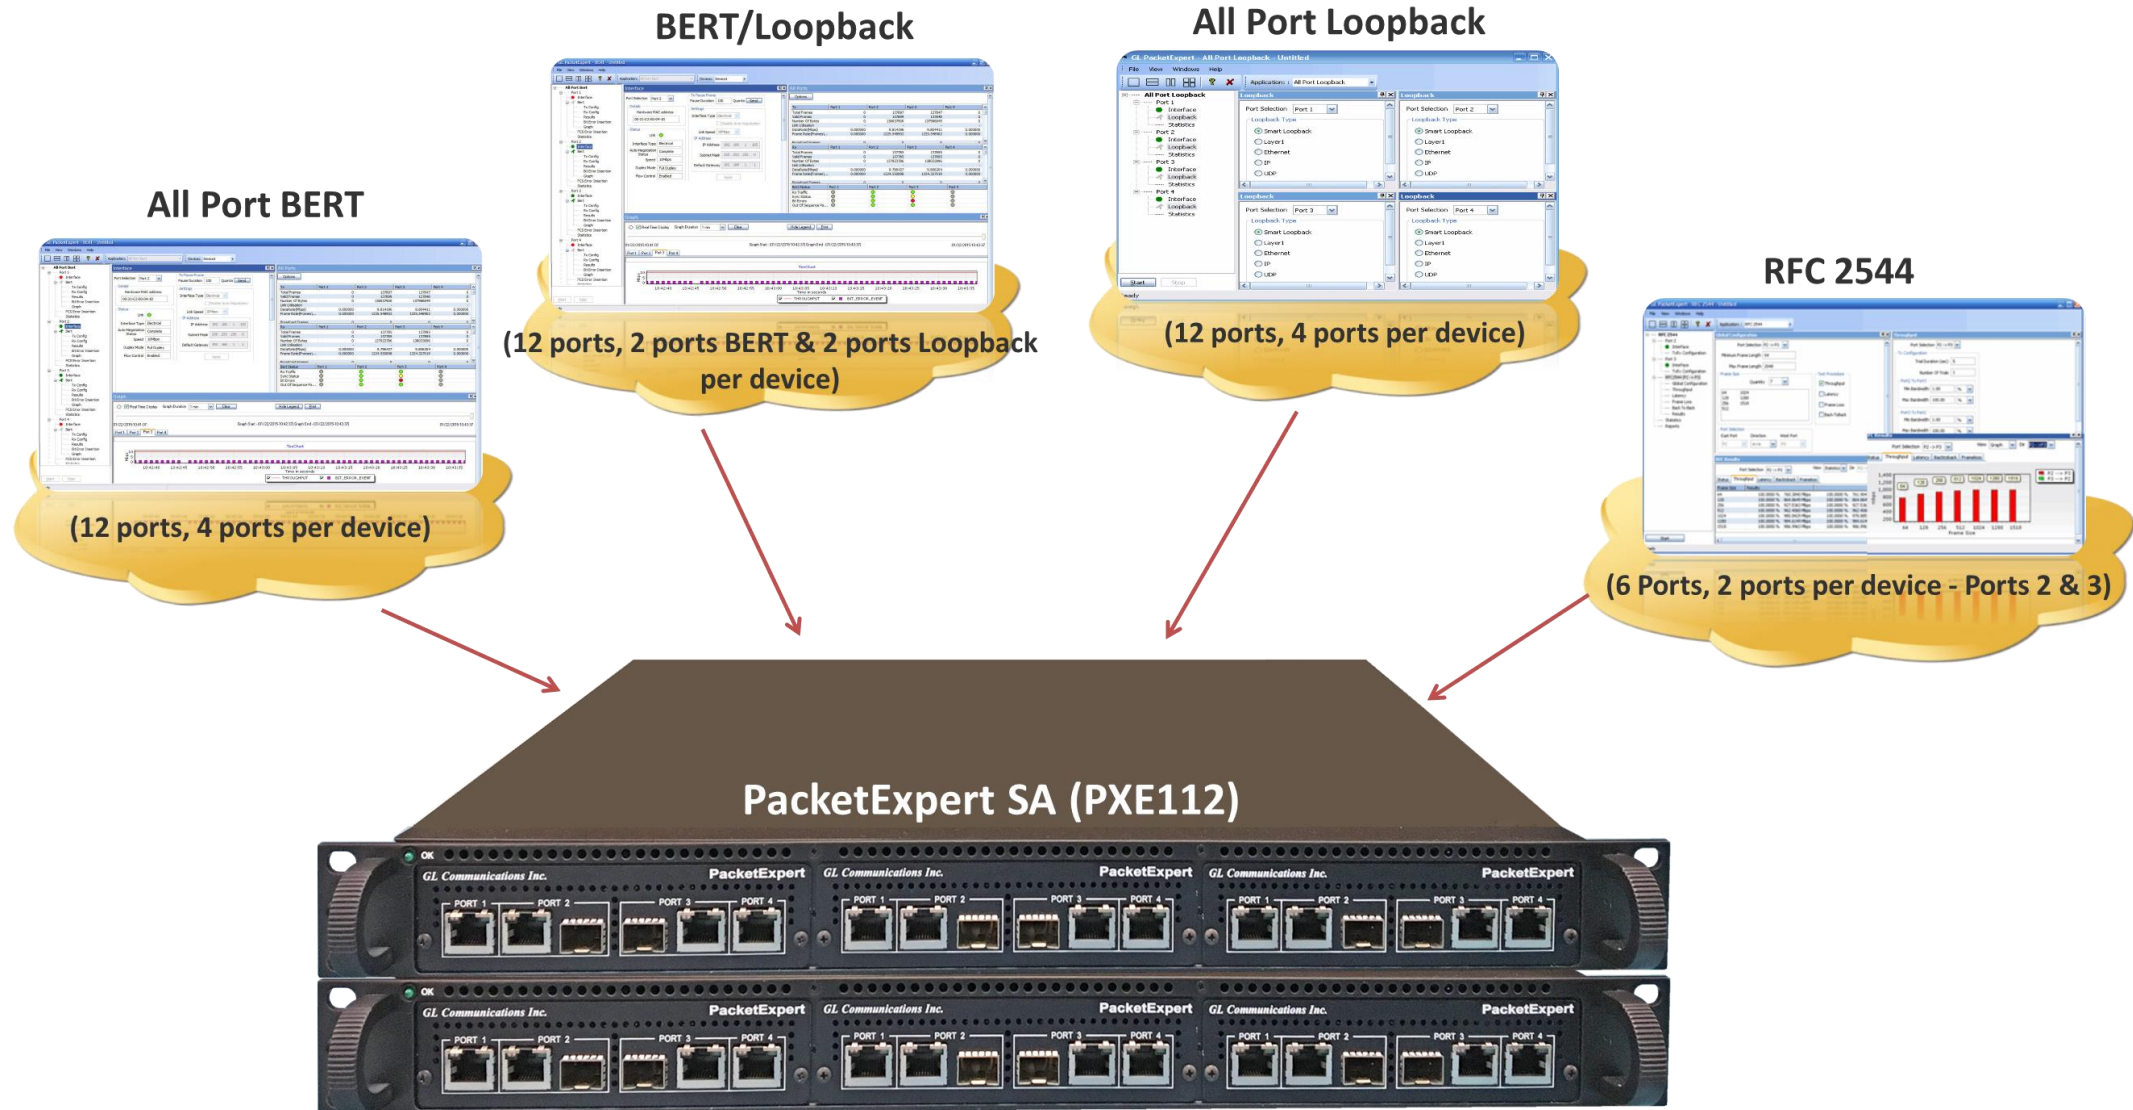

- Portable Quad Port Ethernet/VLAN/MPLS/IP/UDP Tester with 4 Electrical Ethernet Ports (10/100/1000 Mbps) and 2 Optical Ports (100/1000 Mbps). Embedded with Single Board Computer (SBC)
- **SBC Specs:** Intel Core i3 or optional i7 NUC Equivalent, Windows® 11 64-bit Pro Operating System, USB 3.0 and USB 2.0 Ports, ATX Power Supply, USB Type C Ports, Ethernet 2.5GigE port, 256 GB Hard drive, 8G Memory (Min), Two HDMI ports
- Each GigE port provides independent Ethernet/VLAN/MPLS/IP/UDP testing at wire speed for applications such as BERT, RFC 2544, and Loopback.
- RFC 2544 is applicable for Layers 2, 2.5, and 3, and Loopback is applicable for Layers 2, 3, and 4

PacketExpert™ 24 Ports – Hardware Specifications

Different Applications loaded on same Platform

Note: Only one application can run at a time

Optical Connectors and SFP Transceivers

LC Connectors

850/1310 nm SFP Module

- PacketExpert™ supports LC connectors and 850/1310 nm SFP (Small Form-factor Pluggable) modules
- The following SFP modules are supported in 1G:
 - **1000BaseLX** - Long range, MM and SM
 - **1000BaseSX** - Short range, MM and SM
 - **1000BaseT** - Copper and many more

Note: In case customer have different type of connectors, then we need converters like LC-to-SC, LC-to-FC and vice-versa

PacketExpert™ - 24 Ports Unit

Applications

PacketExpert™ 1G

USB 2.0

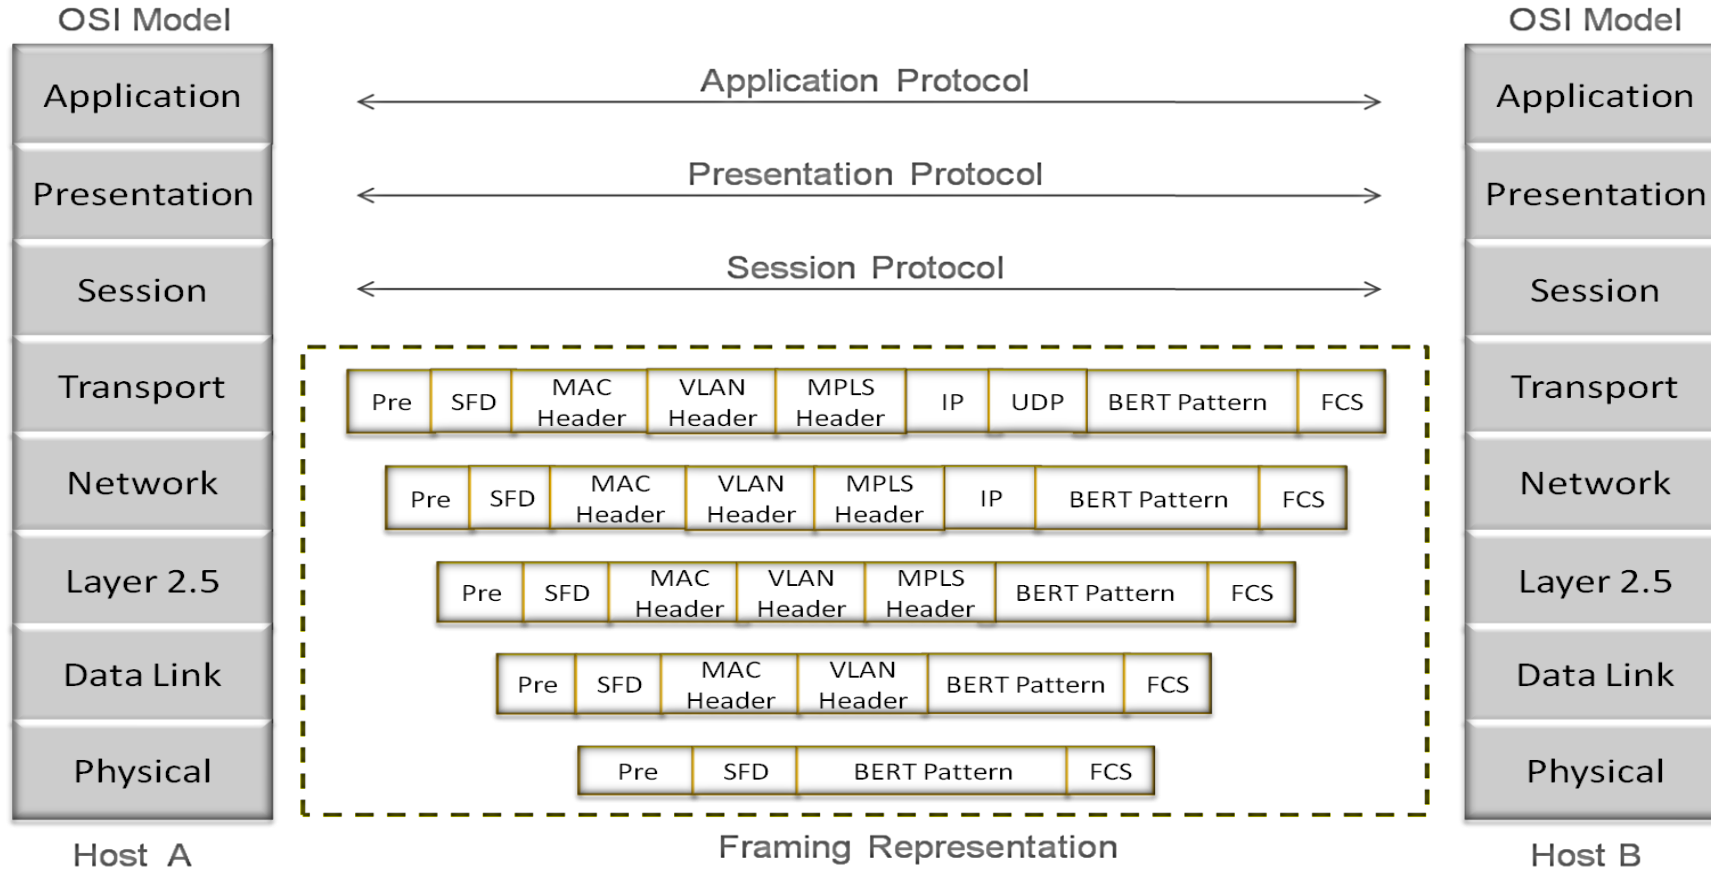

- Bit Error Rate Testing
- RFC 2544
- Loopback
- ITU-T Y.1564
- Multi-Stream Traffic Generator
- RFC 6349
- Record and Playback Traffic
- Wirespeed Network Tap

Applications

- Test and verify QoS Parameters of network devices like Switches/Routers etc.
- End to end testing of network paths for QoS parameters
- In-depth troubleshooting of the Carrier network in the event of network failures or impairments
- QoS testing of Triple-play services to ensure that they fully qualify SLA parameters
- Terrestrial wireless, satellite, and other WAN technologies network validations
- Test VoIP network in real-time conditions to verify if it meets the quality requirements before you deploy
- Testing video on IP networks by emulating the loss and congestion characteristics
- SPF support can be used for Broadband aggregation applications, Metro edge switching, Metro and access multi-service platforms, and are suitable for Fast Ethernet applications

Wire-Speed BERT

OSI Model

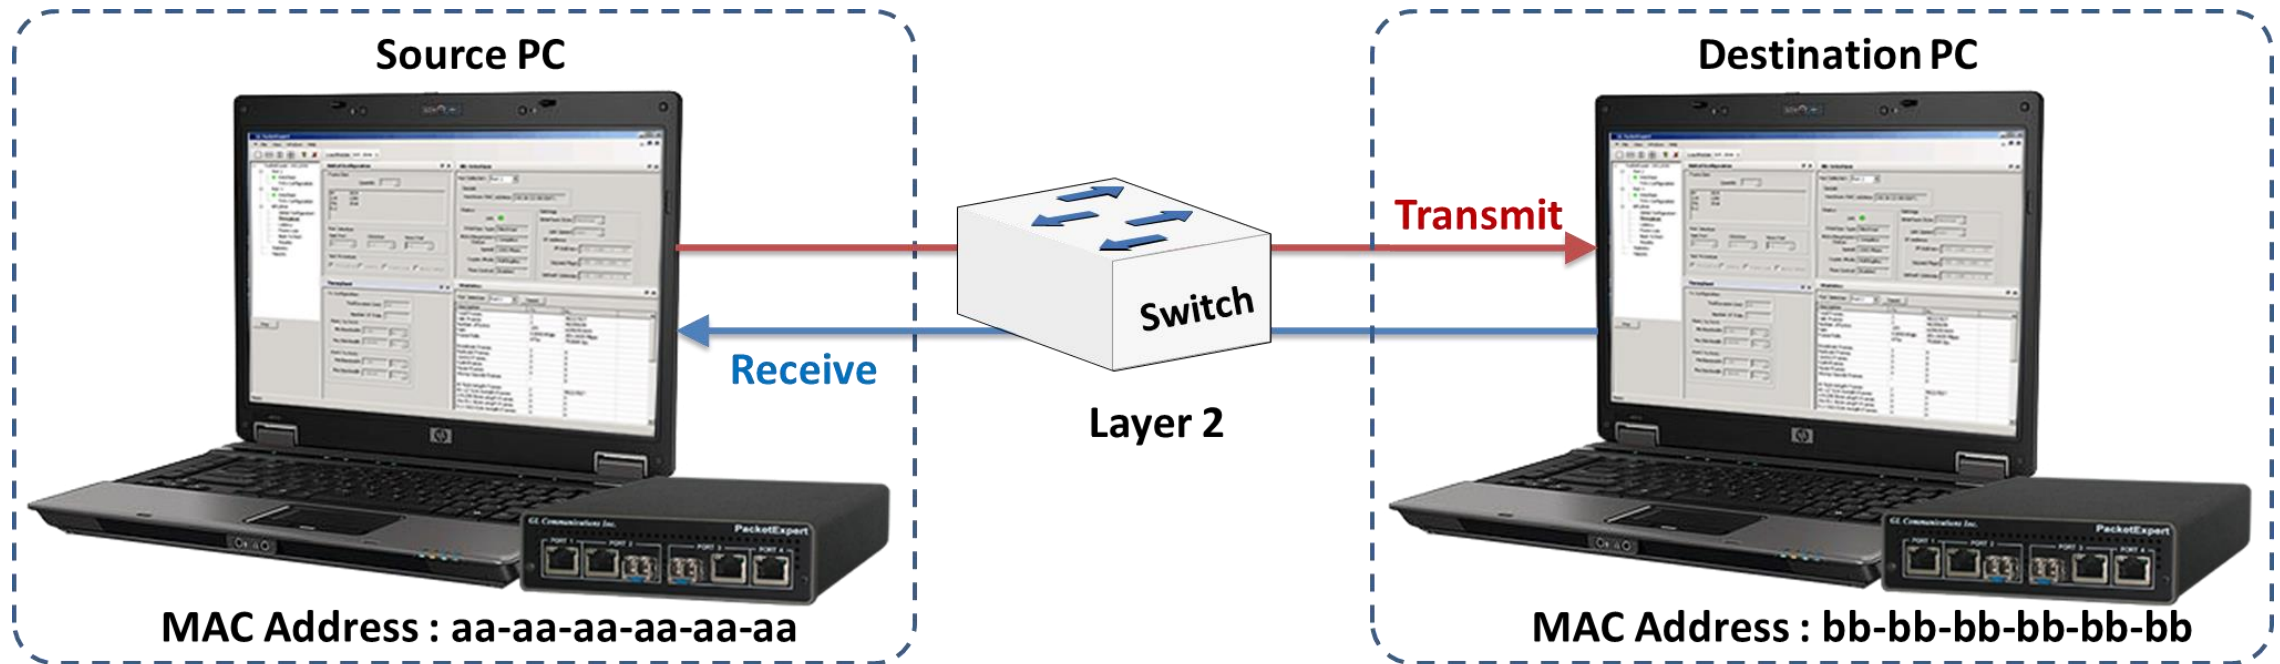

Preamble – 7 Bytes
 Start Frame Delimiter – (SFD)- 1 Byte
 MAC Header –
 • Dest/Src MAC Address – 6 Bytes
 • Ether Length/Type – 2 Bytes (0x0800)
 IP
 • VLAN Header – 4 bytes each

MPLS Header – 4 bytes each
 IP Header – 20 Bytes
 UDP Header – 8 Bytes
 Payload – BER Test Pattern
 Frame Check Sum – (FCS) – 4 Bytes

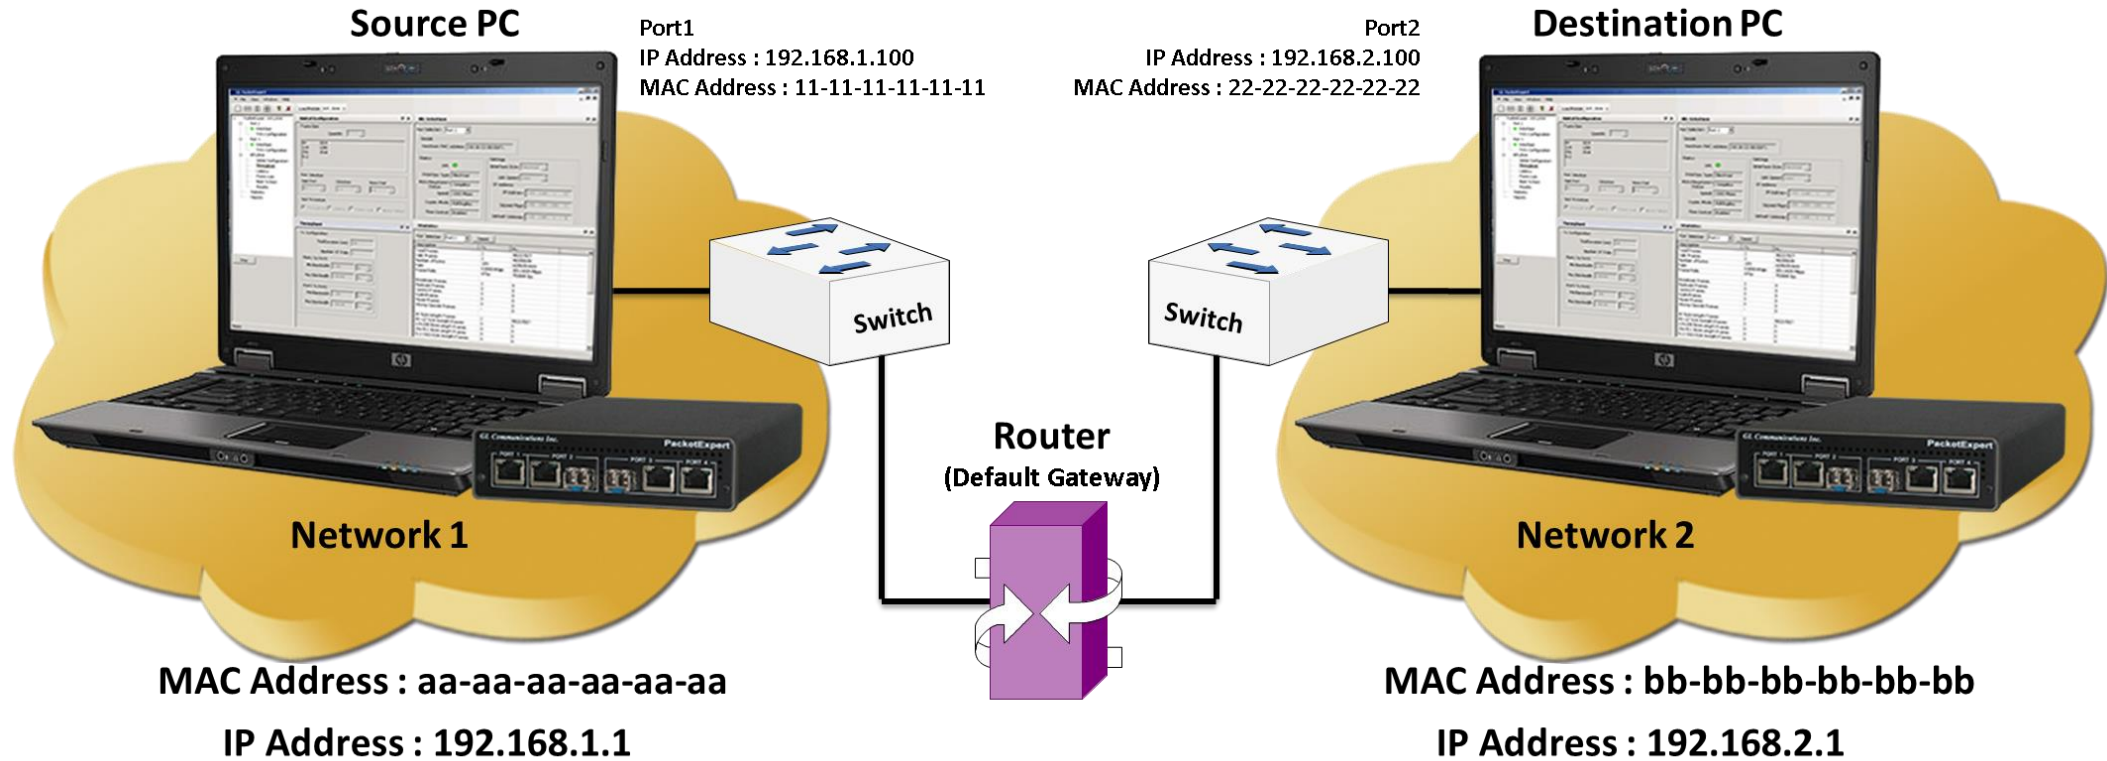

Ethernet
Payload

BER Testing at Layer 2

BER Test Setup at Layer 3/4

Layer 3 Testing between PacketExpert™ located in different IP Networks

- In this case, Source and the Destination PacketExpert™ applications are located in different IP networks. These 2 networks are connected through a router. A simple example above shows 2 LANs connected through a router

PacketExpert™ 24 Ports - BERT

PacketExpert™ (PXE124)

BERT Results (w/ LEDs) and Graph

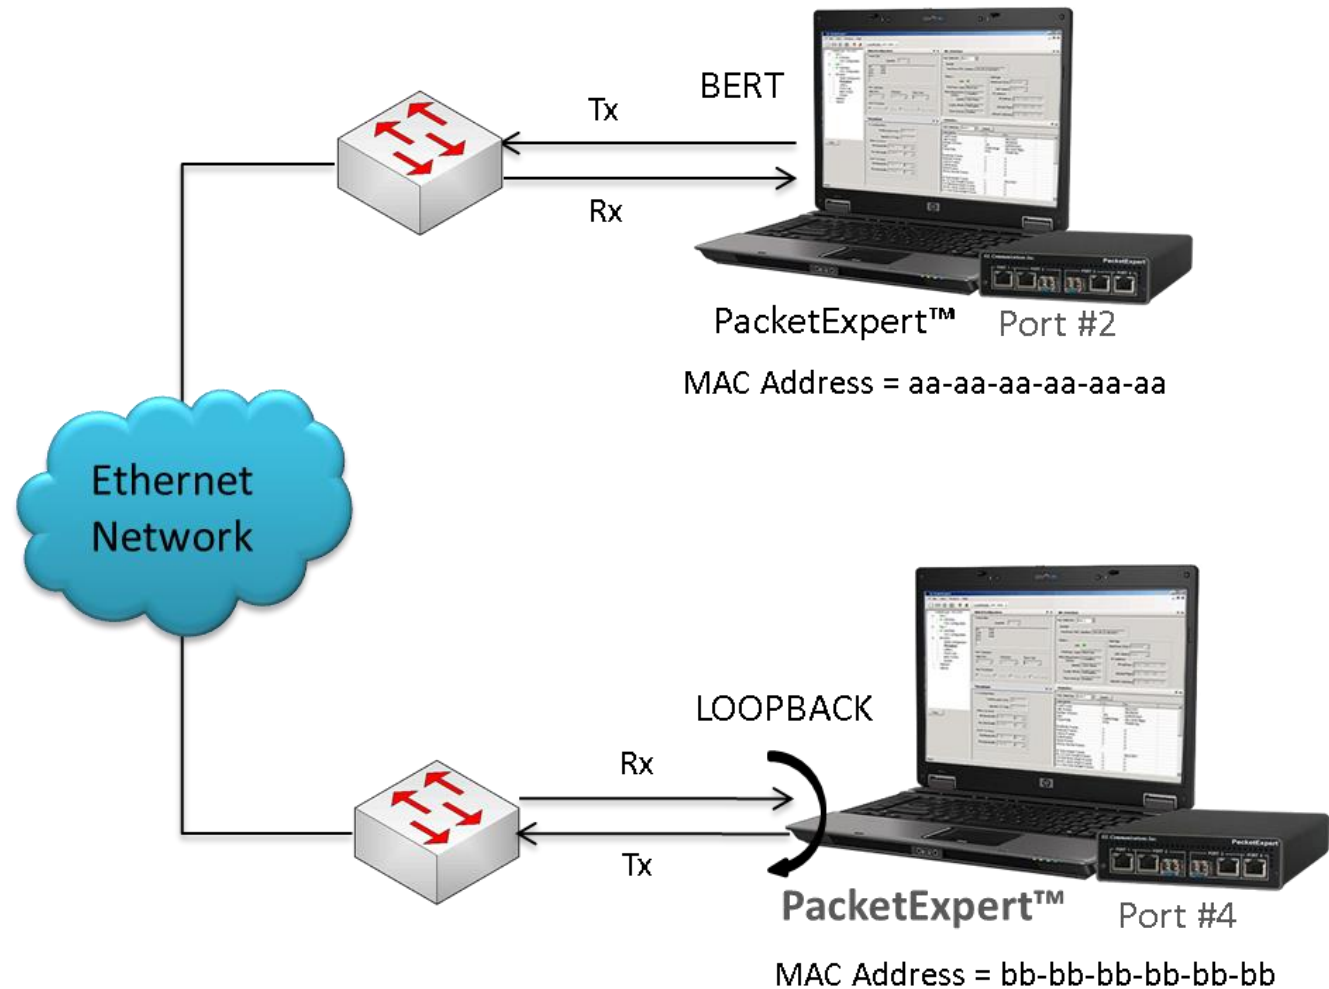

- Optional Sequence number insertion allows detecting Out-of-sequence packets and packet loss
- Detailed BERT statistics like the Bit Error Count, Bit Error Rate, Bit Error Seconds etc. are provided
- Bit Error Count is displayed in both Tabular and Graphical formats

2 Ports BERT and Loopback

- Loopback helps in easy test setup, especially in end-to-end testing, when the other end is in a remote place
- In such cases, one PacketExpert™ can be put in constant Loopback at the remote end, and BERT tests can be started / stopped anytime at the local end

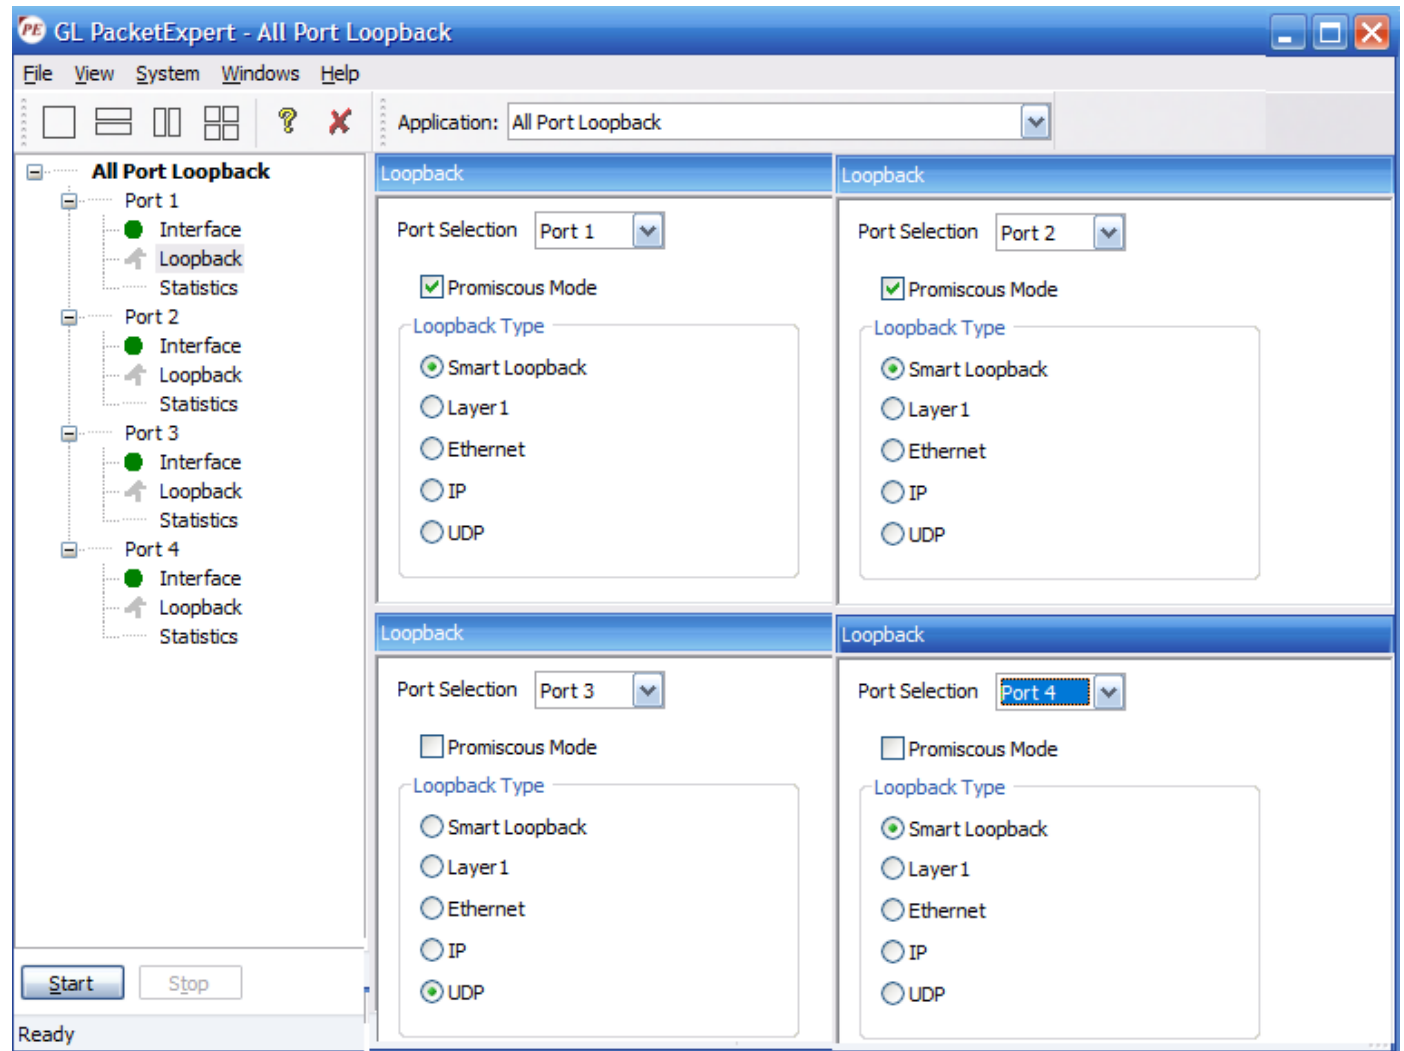

Layer 2 - Ethernet Loopback Types

- PacketExpert™ has all ports/2 ports Loopback capability. PacketExpert™ supports Layer-wise Loopback as well as Smart Loopback
- The above picture depicts the Ethernet Loopback type, swaps Source and Destination MAC addresses before sending back the packet

Loopback Testing (On all Ports/4 Ports)

- Supports Loopback on 10G / 1G ports
- Loopback Types – Smart Loopback, Layer 1, Ethernet, IP, UDP
- General statistics per port (similar to BERT port level statistics)

RFC 2544 Testing

RFC 2544 Testing

RFC 2544 test application includes the following tests:

- **Throughput** - Maximum number of frames per second that can be transmitted without any error
- **Latency** - Measures the time required for a frame to travel from the originating device through the network to the destination device
- **Frame Loss** - Measures the network's response in overload conditions
- **Back-to-Back** - It measures the maximum number of frames received at full line rate before a frame is lost

PacketExpert™ 24 Ports – RFC 2544

PacketExpert™ SA (PXE124)

6 simultaneous bidirectional **RFC 2544**
test at full line rate, up to 1 Gbps

Tx/Rx

Network

(Layer2 – StackVLAN,
MPLS, IP/UDP)

Tx/Rx

Multi-port 1G Switch

Highlights

- Throughput, back-to-back, latency and frame loss testing supporting uni-directional and bi-directional traffic between ports
- Supports RFC 2544 on electrical / optical (1000Mbps) ports
- Includes various parameter configurations such as Test Selection, Frame Sizes selection, Unidirectional/Bidirectional, Number of trials, Trial Duration, and many more
- User-defined options to configure various packet header parameters, like MAC addresses, IP addresses, UDP ports, VLAN ID, MPLS Labels, and more
- Results are displayed in both tabular as well as graphical format

Results

- **Throughput** – Both relative (% of link speed) and absolute (in Mbps) throughput values are displayed
- **Latency** – displayed in Microseconds
- **Back-to-Back** – Displayed in Frames/Burst
- **Frame Loss** – Displays the Frame Loss Rate (in %) against attempted Frame Rate (in % of link speed)

Port Statistics

- Per port detailed statistics are provided –
 - Tx / Rx Frame count
 - Number of Bytes transmitted & received
 - Tx & Rx Frame Rate
 - Broadcast, Multicast, Control, VLAN, Pause Frame count
 - Frame count for byte lengths 64/65-127
 - MPLS and VLAN Frame count for various stack level
 - IPv4/ UDP packet count
 - Oversized / Undersized Error frame count
 - FCS error count
 - IP/UDP checksum error count and others

The screenshot shows a 'Link Statistics' window with a 'Port Selection' dropdown set to 'Port 2' and a 'Reset' button. The table below displays the statistics for this port.

Description	Tx	Rx
Total Frames	32831073	32831083
Valid Frames	32831073	32831083
Number of Bytes	8093381216	8093381860
Link Utilization(%)	0.000	0.000

```

Executing Sample C# Client

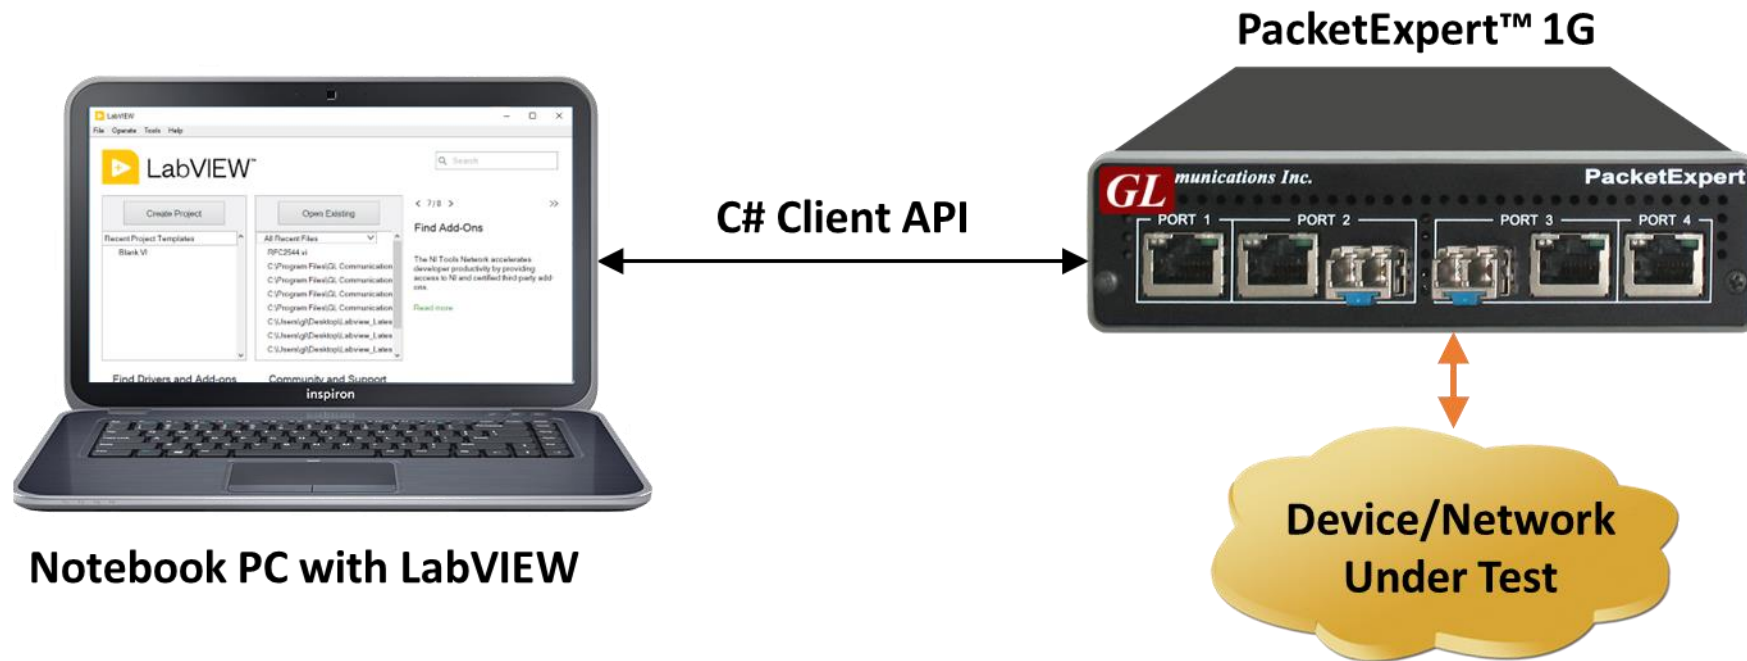

```
C:\Program Files\GL Communications Inc\PacketExpertPxeClient\C#\AllPortBert_ConsoleApplication.exe

Port3
Traffic Status: Rx Traffic
Sync Status: InSync
Bit Error Status: No Error
Out Of Sequence Status: No Error
BERT Status: Sync
BERT Test Time: 00:00:18
Bits Received: 17 012 794 104
Bit Error Count: 0
Bit Error Rate: 0.000E+00
Bit Error Seconds: 0
Sync Loss Count: 0
Sync Loss Seconds: 0
Out of Sequence Count: 0
Out of Sequence Seconds: 0
Error Free Seconds: 19

Port4
Traffic Status: Rx Traffic
Sync Status: InSync
Bit Error Status: No Error
Out Of Sequence Status: No Error
BERT Status: Sync
BERT Test Time: 00:00:18
Bits Received: 17 071 621 200
Bit Error Count: 0
Bit Error Rate: 0.000E+00
Bit Error Seconds: 0
Sync Loss Count: 0
Sync Loss Seconds: 0
